Catalog Description: PHYS 411, Classical Mechanics  
3 semester hours  
A course in the classical mechanics of particles and rigid bodies. The method of Lagrange and Hamilton are introduced.

Objective 1: Students will demonstrate that they have mastered the theories and techniques in solving kinematics problems for particles moving in 1 to 3 dimensions

Objective 2: Students will demonstrate that they have mastered Newton’s laws and associated techniques to solve dynamical problems of interacting particles in 1 to 3 dimensional situations

Objective 3: Students will demonstrate that they have mastered the theories and techniques to solve both kinematic and dynamical problems of rigid bodies rotating about fixed or arbitrary axis

Objective 4: Students will demonstrate that they understood Hamiltonian’s variational principle and mastered the techniques in applying Lagrange equations in solving practical problems

Grading:

<tr>
<td>Home works</td>
<td>50%</td>
</tr>
<tr>
<td>Exams</td>
<td>50%</td>
</tr>
</tbody>
</table>

Grade Scale:

- 90 and above -- A
- 80 to 90 -- B
- 70 to 80 -- C
- 60 to 70 -- D
- below 60 -- F

Homework:

Homework will be assigned regularly and it may be discussed in class. The homework counts 50% towards the final grade.

Exams:

There will be totally 2 in-class exams including the final. All exams will be given equal weight, and all will have an in-class component. At the instructor’s discretion, a take-
home component may also be assigned in order to test the students on more difficult or
time-consuming problems. **Students must do their own work on any take-home
components of exams.**

**Cheating, Plagiarism, and other Breaches of Academic Conduct:**
Academic cheating, plagiarism, and other forms of academic misconduct may result in
removal of the student from class with a failing grade or may in extreme cases result in
suspension or expulsion from the University as described in the “Code of Student
Conduct” section of the *Student's Guidebook.*

**Classroom Behavior:**
Disorderly conduct which interferes with the normal classroom atmosphere will not be
tolerated. The classroom instructor is the judge of such behavior and may instruct a
disorderly student to leave the room with an unexcused absence or, in more serious
situations, a student may be removed from the class with a failing grade. **All students
enrolled at the University shall follow the tenets of common decency and acceptable
behavior conducive to a positive learning environment. (See Student’s Guide
Handbook, Policies and Procedures, Conduct)**

**Attendance and Tardiness:**
*Students are expected to be on-time and present for all class meetings.* Excused
absences can be arranged prior to the class period being missed for appropriate activities
as determined by the instructor. If an emergency results in an absence, the student
should contact the instructor as soon as possible informing the instructor of the
emergency and inquiring about ways to make up the missed class. The instructor will
make judgments on how to handle the situation. Possible reasons for an excused absence
are listed in the *Student's Guidebook* under class attendance policy. A student who is
tardy at the time roll is called may be marked absent. Attendance records will be
maintained.

Any student who misses more than three consecutive classes without a proper
excuse will be penalized a letter grade.

**ADA Eligible Students:**
ADA eligible students should make arrangements with the instructor in the first week of
the semester about special arrangements needed for classroom or testing facilities and
procedures to accommodate the disability.

**Evaluation of Instruction:**
Students will be given opportunities to evaluate instruction near the end of the semester.
The physics department utilizes a scantron-graded questionnaire with statements
regarding various elements of instruction and in addition utilizes an open-ended form
where students can make comments on all elements of the classroom. These comments
are given to the instructor and department head soon after the grades are recorded. If
students have concerns about the classroom experience during the semester they should
inform the instructor of those concerns and failing a satisfactory response may, as a last resort, contact the physics department head with those concerns.
