Navarro Partnership

Bachelor of Science in Interdisciplinary Studies leading to teacher certification in:

EARLY CHILDHOOD EC-GRADE 6

Are you the kid who used to take on the role of teacher when you played school with your friends? If you answered yes, you share a lot in common with people who work with children as a profession. You might consider majoring in early childhood education and becoming a Texas certified teacher. You'll learn how to create and manage a nurturing, safe classroom where every child thrives. It helps to be caring, patient, and creative. Teamwork skills are vital too. You'll want to teach cooperation to your students, and you'll need it yourself—chances are you'll be working with an aide or another teacher.

EARLY CHILDHOOD EC - GRADE 6 WITH BILINGUAL

Students who were raised speaking a language other than English face an astounding challenge. They must master English, study the usual load of academic subjects, and continue advancing in their first language. And sometimes they have to do it all at once. Will such students sit lost in class, graduating with few skills? Or will they succeed in school and beyond, enriching our society with the special perspective of those who straddle two cultures? As a bilingual teacher, you can make the difference. It helps to be passionate about helping bilingual students succeed without losing their own rich heritage. This is a great major for people who love to study other languages and cultures.

GRADES 4-8 MATHEMATICS

If you enjoy puzzling over math problems and explaining concepts to others, you might enjoy being a math teacher. It helps to be someone who enjoys using both logic and creativity. You'll use your logical side as you teach students step-by-step how to reach correct answers. And you'll use your imaginative side to invent fun, lively lessons, relevant to your students' lives.

GRADES 4-8 SCIENCE

If you love science and want to inspire others to be independent thinkers, you might enjoy a career as a science teacher. It helps to be comfortable with technology and hands-on learning -science education these days uses a lot of both. You'll be helping students use computers to do research and interactive science lessons, and you'll be leading activities that range from lab experiments to nature field trips.
